Generic One-alpha

Alfacalcidol is an active metabolite of Vitamin D, which performs important functions in regulation of the calcium balance and the bone metabolism. Alfacalcidol is Vitamin D-hormone analog which is activated by the enzyme 25-hydroxylase in the liver for systemic and in osteoblasts for local D-hormone actions. It possesses a unique pattern of pleiotropic effects on, e.g. gut, bone, parathyroids, muscle and brain. Alfacalcidol is superior to plain vitamin D (cholecalciferol) because the final kidney activation of the latter is regulated by a negative feedback mechanism. Although alfacalcidol is widely used in the treatment of osteoporosis, its mechanism of action in bone is not fully understood. Alfacalcidol stimulates intestinal calcium (Ca) absorption, increases urinary Ca excretion and serum Ca levels, and suppresses parathyroid hormone (PTH) secretion.

Active ingredient: [Alfacalcidol](#)

Brand(s):Alfocal

Manufacturer: Macleods

Disease(s):Osteoporosis / Hypocalcemia / Hypophosphatemia / Osteodystrophy / Rickets / Prophylaxis / Secondary Hyperparathyroidism / Tetany / Vitamin D Deficiency /
