Glipizide and Metformin Hydrochloride tablet

What is this medicine?

GLIPIZIDE; METFORMIN helps to treat type 2 diabetes. Treatment is combined with diet and exercise. This medicine helps your body to use insulin better.

What should I tell my health care provider before I take this medicine?

They need to know if you have any of these conditions:

- become easily dehydrated
- diabetic ketoacidosis
- heart disease
- if you frequently drink alcohol containing drinks
- kidney disease
- liver disease
- polycystic ovaries
- severe infection or injury
- stroke
- thyroid disease
- undergoing surgery or certain x-ray procedures with injectable contrast agents
- an unusual or allergic reaction to glipizide, metformin, sulfa drugs, other medicines, foods, dyes, or preservatives
- pregnant or trying to get pregnant
- breast-feeding

How should I use this medicine?

Take this medicine by mouth with meals. Swallow with a drink of water.
